

Report 1 — 320px

Symptom: The navigation takes up a lot of space on the small screen.

Status: Reproduced

Hypothesis: I thought the navigation took too much space because the links were placed one below another.

Actual Cause: The navigation was vertical and had a large gap between the links.

Fix: I reduced the gap between the navigation links on small screens.

Retest: The navigation takes less space after the change.

Report 2 — 320px

Symptom: The project section feels crowded on the small screen.

Status: Partially reproduced

Hypothesis: I thought the project section felt crowded because there was less space on a 320px screen.

Actual Cause: The section was naturally more compact because of the small screen size. The spacing change did not make a clear difference.

Fix: No final fix was needed.

Retest: project section still looks similar, so the reported problem was only partially confirmed.

Report 3 — 768px

Symptom: The sections have different amounts of empty space.

Status: Not reproduced

Hypothesis: I thought the different amounts of content might make the sections look uneven.

Actual Cause: No clear layout defect was found during testing.

Fix: No fix was needed.

Retest: The sections looked normal at 768px.

Report 4 — 768px

Symptom: The navigation is still vertical even though there is more space.

Status: Reproduced

Hypothesis: I thought the navigation stayed vertical because it did not change direction at wider screen widths.

Actual Cause: The navigation had no wider-screen rule to change it to a horizontal layout.

Fix: I changed the navigation to a horizontal layout at 700px and above.

Retest: The navigation is now horizontal at 768px.

Report 5 — 1440px

Symptom: The sections look small because there is a lot of empty space around them

.Status: Not reproduced

Hypothesis: I thought the wide screen might make the sections look too small.

Actual Cause: No clear layout problem was found at 1440px.

Fix: No fix was needed.

Retest: The sections looked normal at 1440px.

Report 6 — 1440px

Symptom: The page looks too spread out on the wide screen.

Status: Not reproduced

Hypothesis: I thought the page might feel too spread out because of the wide screen.

Actual Cause: No clear layout problem was found during testing.

Fix: No fix was needed.

Retest The page looked normal at 1440px.
